To: Software Engineering Team
Company: Medius
Subject: Software Engineering Internship

Dear Medius Team,
To any computer science student in Tunisia, Medius is one of the most exciting places to start a career, especially seeing how a company that grew right here in Tunis now builds software used by businesses worldwide.
I have friends at Medius who always speak highly of the engineering culture, particularly how much the team values clean code, constructive code reviews, and senior engineers who take the time to mentor and guide you. That kind of environment is exactly what I am looking for as someone who loves building backend systems and wants to learn how production software is properly designed alongside engineers I can look up to.
I would love the opportunity to join the team, work hard, and contribute with full dedication.
Thank you for your time, and I look forward to the possibility of speaking with you soon.

Best regards,

Jasser Houimli
