EDUCATION

Institut Supérieur des Arts Multimédia de la Manouba (ISAMM)

Manouba, Tunisia

Bachelor Degree in Computer Engineering

2024 – 2027

PROJECTS

AI Learning – ML Classification & Clustering on Carseats | github.com/jasserhouimli/ailearning

- Built a complete ML pipeline in Python using the Carseats dataset to predict high and low sales.
- Implemented and compared KNN, K-Means clustering, Random Forest (with hyperparameter tuning), and SVM with an RBF kernel.
- Analyzed feature importance with Random Forest and visualized clusters and model performance with Matplotlib.

Salary Analytics Dashboard | github.com/jasserhouimli/bigdata

- Built a 12-container Hadoop and Spark cluster using Docker Compose for distributed data processing.
- Developed a Streamlit dashboard with interactive Plotly charts to visualize salary trends.
- Implemented PySpark ETL and a MapReduce job for transaction analysis.

ModeforcesAPI – Codeforces-like Backend | github.com/jasserhouimli/modeforcesAPI

- Built a backend API in C# with problem management, submission handling, and user authentication.
- Used ASP.NET Core, Entity Framework Core, PostgreSQL, and JWT-based security.
- Containerized with Docker and made deployable via Zerops.

RJA3: Lost & Found Backend API | github.com/jasserhouimli/RJA3

- Designed and built a RESTful API for a lost-and-found platform with user authentication, item reporting, and matching logic.
- Implemented CRUD operations, search and filtering, and role-based authorization.
- Documented the API with Swagger and wrote unit tests with xUnit.

TapTapRace | github.com/jasserhouimli/TapTapRace

- Built a real-time typing race game with room-based gameplay and live messaging.
- Implemented an ASP.NET Core SignalR hub for join/leave and real-time updates.
- Exposed REST endpoints to create and list rooms, then wired a React + TypeScript UI to consume them.

Competitive Programming Solutions Repository | *C++, Python*

- Maintained a GitHub repository with solutions to 150+ competitive programming problems.
- Covered topics include dynamic programming, graphs, number theory, strings, and data structures.

EXPERIENCE

Competitive Programming

Ongoing

Independent

Online

- Codeforces **Pupil**; profile: codeforces.com/profile/JasserCC.
- Solved 200+ problems across Codeforces, AtCoder, and LeetCode.
- Competed in university-level ICPC local contests.
- Strong foundations in algorithms: sorting, binary search, graphs, dynamic programming, and greedy techniques.

TECHNICAL SKILLS

Languages: Python, C++, C#, Java, SQL

Backend: ASP.NET Core, Entity Framework Core, REST API design

Big Data: Hadoop (HDFS, MapReduce), Apache Spark (PySpark), Docker

Databases: MySQL, PostgreSQL, SQL Server

Tools: Git, Linux command line, Jupyter Notebook, VS Code, Postman

Libraries: Pandas, NumPy, Matplotlib, Plotly
