# Jasser Houimli

+216 23628074 | Manouba, Tunisia | houimlijasser9@gmail.com | linkedin.com/in/jasserho1 | jasserhouimli.github.io/me | github.com/jasserhouimli

## Summary

Computer engineering student focused on big data and data engineering. Builds data pipelines with Spark and Hadoop, and backend services in Python and .NET. Open to 2026 data and backend internships.

## Education

**Institut Supérieur des Arts Multimédia de la Manouba (ISAMM)** Manouba, Tunisia
*Bachelor's Degree in Computer Science* *2024 – 2027*
**Relevant Coursework**: Big Data, Machine Learning, Databases, Data Structures & Algorithms, Operating Systems, Computer Networks

## Projects

**Reflow – Visual Data Pipeline Orchestration** | github.com/jasserhouimli/Reflow
- Built a visual ETL tool with a .NET 10 backend and a React 19 + TypeScript + React Flow editor where users drag from 10 node types to design a data pipeline.
- Engineered the DAG execution engine: dependency-ordered tasks compiled to SQL, bounded retries, cancellation, and recovery of tasks left running after a crash.
- Added idempotent webhook and cron triggers, plus 106 tests (81 unit, 25 integration) and a GitHub Actions CI pipeline.

**Salary Analytics – Hadoop & Spark Pipeline** | github.com/jasserhouimli/SalarySwarm
- Developed a PySpark ETL pipeline that extracted, cleaned, and aggregated 250,000+ salary records on a 12-container Hadoop and Spark cluster set up with Docker Compose.
- Created a Streamlit dashboard to explore salary trends from the processed data.

**AI Learning – ML Classification & Clustering** | github.com/jasserhouimli/ailearning
- Trained KNN, SVM, and Random Forest models to predict sales from the Carseats dataset, reaching 87% accuracy with a tuned Random Forest.
- Evaluated the models on accuracy, precision, recall, and speed, and used feature-importance plots to choose the best inputs.

**SketchTogether – Real-Time Collaborative Whiteboard** | github.com/jasserhouimli/sketch-together
- Built a real-time collaborative whiteboard with .NET 10 Minimal APIs and SignalR where users create a board, share a link, and others join to draw and add sticky notes together live.
- Persisted boards with EF Core (SQLite) so they reload after refresh, and added a live presence count, save status, and shared undo/redo.

**ModeforcesAPI – Codeforces-like Backend** | github.com/jasserhouimli/modeforcesAPI
- Designed a REST API with 11 endpoints for problems, submissions, and accounts, secured with JWT login.
- Modeled the PostgreSQL schema with EF Core, documented it with Swagger, and included a judge that runs C, C++, Java, and Python submissions.

## Experience

**Competitive Programming** Ongoing
*Independent* *Online*
- Solved 200+ algorithm and data-structure problems on Codeforces, AtCoder, and LeetCode.
- Reached **Pupil** on Codeforces and competed in team-based ICPC contests. codeforces.com/profile/JasserCC

## Technical Skills

**Data & ML**: Apache Spark (PySpark), Hadoop (HDFS, MapReduce), Pandas, NumPy, Scikit-learn, Matplotlib, Plotly, Streamlit
**Data Stores**: PostgreSQL, MySQL, SQL Server
**Languages**: Python, C#, C++, TypeScript, SQL
**Backend**: ASP.NET Core, Minimal APIs, Entity Framework Core, SignalR, REST, JWT
**Frontend**: React 19, React Flow, Vite, Tailwind
**Infra & Tools**: Docker, GitHub Actions (CI), Git, Linux, Jupyter, Postman, xUnit, pytest
